

IVD SYSTEMS - REAGENTS - INSTRUMENTS - SERVICES

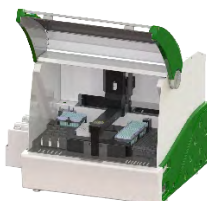

Dear Valued Customer,

Adaltis S.r.l. proudly presents its new instrument family for fully automated microELISA processing. The instruments are newly designed, based on reliable and state of the art technology. Over 20-years experience in making automated microELISA instruments, we are your trusted choice:

NEW

Personal LAB

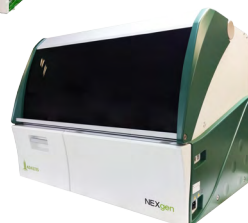

Fully automated 2-plate microELISA processor,
including IFA test options

NEW

NEXgen

Fully automated 7-plate microELISA processor,
including IFA test options

Major Instrument characteristics:

- High throughput testing of microELISA, optional IFA testing can be done simultaneously
- 'Kit-to-Instrument' direct loading from reagents bottles/vials from kit, into the instrument
- Continuous liquid monitoring- for buffers and waste solution
- Latest technology for hardware, increased instrument precision and reliability
- Extremely reduced maintenance
- Easy user interface to program applications, protocols and run sessions
- Remote diagnostics/support of software and hardware

Advantages

- Less operator time needed for the instrument operation, long walk-away times
- Faster and more accurate, more optimised test routine of assays
- Most economic use of reagents, due to absence of pouring liquids into containers/vials
- One of the best serviceability of the instruments in the market of today

Reagent Tests

Our range of EIAgen microELISA assays are excellent combining with the new Personal LAB and new NEXgen instruments:

- Fully compatible CE-IVD assays for best and optimal performance
- Fully validated assays and proven combination 'instrument & reagents from one source'
- Wide range of microELISA assays for bloodbanks (HIV, HBsAg, HCV, Syphilis, HTLV), serology, virology, ToRCH, thyroids, hormones, vitamins and many more.
